HETA

Moderna

Moderna has a stylish glass front or cast iron door and can be chosen both with and without side glass and bottom door. The wood-burning stove is available in a black and gray color, so that it appears as a unifying, cozy and warm focal point in the living room. It is possible to choose between steel and soap-stone in both variants.

It is possible to purchase Heta's HAC 2.0 technology for Moderna, which is easy to control through Heta's app for Android/iOS via Bluetooth. There is an indicator attached to the oven which, using color codes (red, yellow and green) draws attention to if there is a need for new ignition, or if too much firewood is loaded. The stove's door is equipped with a door sensor that detects when new firewood has been added.

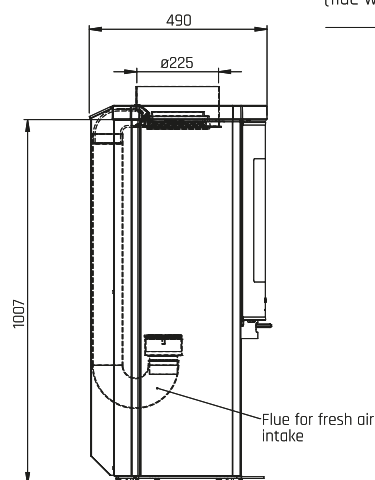

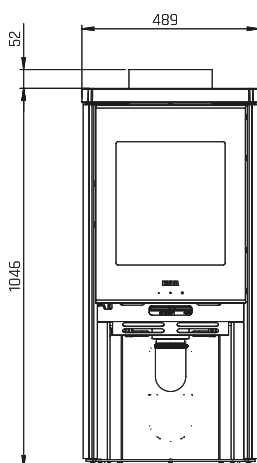

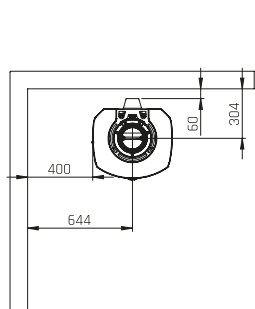

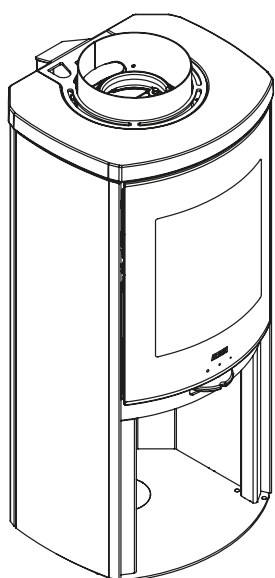

Moderna V

Equipped with technology

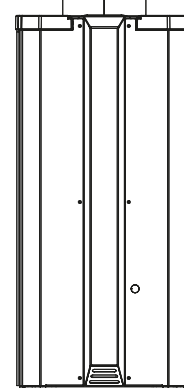

Moderna V is a stylish solution for low-energy houses that require a fresh air supply. The fresh air vent on the top provides a lot of flexibility for the location of the stove and eliminates the need for a separate air supply under or behind the stove. The combustion air supply pipe is integrated into the stove without reducing the size of the firebox at all, which still measures 26 cm in depth.

Moderna V is available with or without side windows, in steel or with soapstone. In addition, Moderna V has all the same excellent properties as the standard Moderna model.

It is possible to purchase HETA's HAC 2.0-technology for Moderna V, which is easy to control using HETA's app for Android/iOS via Bluetooth. There is an indicator attached to the stove that uses colour codes (red, yellow and green) to alert you if it needs to be reignited or if there is too much firewood. The stove's door is equipped with a sensor that detects when new firewood has been added.

For use with a concentric flue (flue with built in fresh air) .

HAC 2.0

Icon-Line Moderna

 Made in Denmark

Mobile app for Android and iOS

Heta's HAC 2.0 technology for Moderna can be purchased separately and is easy to control using Heta's app for Android/iOS via Bluetooth.

HAC 2.0 is, first and foremost, a convenient aid in getting the highest possible heating value out of the firewood and, thus, the best possible value for money compared to manual operation. In addition, HAC 2.0 ensures against user error, as the temperature in the firebox will always be perfect.

An indicator is attached to the stove, which uses colour codes (red, yellow and green) to alert you if reignition is necessary or too much firewood has been loaded. The stove's door is equipped with a door sensor that registers when new firewood is added.

Eclipse

Eclipse is a beautiful, powerful wood-burning stove that is perfect for smaller rooms, as a cozy gathering point for family and friends. It is possible to choose between a black and gray color and steel or soapstone, so Eclipse an extension of your interior decor. With a very small distance behind the stove to combustible material, the Eclipse is perfect for holiday homes. Eclipse can be selected both with and without side glass.
